measure of the central angle is the same as the measure of the arc it intercepts. For example: If the measure of the central angle is  $\theta$ , then the measure of the intercepted arc is also  $\theta$ . Inscribed Angles: Angles with the vertex located on the circumference of the circle.. The measure of the inscribed angle is half ...

## **15.1 Central Angles and Inscribed Angles**

Inscribed Angles. An inscribed angle in a circle is formed by two chords that have a common end point on the circle. This common end point is the vertex of the angle. Here, the circle with center  $O$  has the inscribed angle  $\angle ABC$ . The other end points than the vertex,  $A$  and  $C$
