Compressible Fluid Flow By Patrick H. Oosthuizen Solution ...
Compressible flow is the branch of fluid mechanics that deals with flows having significant changes in fluid density. While all flows are compressible, flows are usually treated as being incompressible when the Mach number is less than 0.3. The study of compressible flow is relevant to high-speed aircraft, jet engines, rocket motors, high-speed entry into a planetary atmosphere, gas pipelines, commercial applications such as abrasive blasting, and many other fields.

This is the second textbook by Oosthuizen that I've used and it provides a good and comprehensive introduction to 1-D compressible fluid flow. Oosthuizen develops all of the fundamental equations in a straight forward manner and there are a sufficient number of worked examples that are oriented towards applications in other fields of ...
