~~Cardiac catheterisation and coronary angiography | NHS inform~~
Coronary angiography provides information about the coronary arteries, which supply the heart with oxygen-rich blood. Coronary angiography is similar to catheterization of the left side of the heart because the coronary arteries branch off the aorta just after it leaves the left side of the heart (see Blood Supply of the Heart).

~~Coronary Angiography An Introduction To~~
Coronary angiography: An introduction to interpretation and technique by James F Silverman (Author)

~~Coronary Angiography: Preparation, Procedure, and Results~~
A coronary angiogram is a procedure that uses X-ray imaging to see your heart's blood vessels. The test is generally done to see if there's a restriction in blood flow going to the heart. Coronary angiograms are part of a general group of procedures known as heart (cardiac) catheterizations.

~~Coronary Angiography: An Introduction to Interpretation ...~~
Coronary angiograms are minimally-invasive procedures designed to visualise the arteries of the heart. By injecting contrast dye directly into the arteries, X-rays allow practitioners to see any narrowings within the vessels, and then proceed to reopen them using a variety of tools (angioplasty).

~~Coronary angiography: An introduction to interpretation ...~~
A coronary angiography is a test to find out if you have a blockage in a coronary artery. Your doctor will be concerned that you're at risk of a heart attack if you have unstable angina, atypical chest pain, aortic stenosis, or unexplained heart failure.

~~Introduction to Coronary Artery Disease » Division of ...~~
Angiography or arteriography is a medical imaging technique used to visualize the inside, or lumen, of blood vessels and organs of the body, with particular interest in the arteries, veins, and the heart chambers. This is traditionally done by injecting a radio-opaque contrast agent into the blood vessel...

~~Introduction to Coronary Angioplasty—The Student ...~~
Procedural Techniques of Coronary Angiography Jasmin ĩ aluk BH Heart Center Tuzla Bosnia-Herzegovina 1. Introduction Coronary angiography is an invasive diagnostic procedure in which radiocontrast is injected into the coronary arteries under X-ray guidance in order to display the coronary anatomy and possible luminal obstruction.

~~Radiation Exposure in Coronary Angiography: A Comparison ...~~
Introduction. Radiation dose to patients undergoing invasive coronary angiography (ICA) is relatively high. Guidelines suggest that a local benchmark or diagnostic reference level (DRL) be established for these procedures. This study sought to create a DRL for ICA procedures in Queensland public hospitals.

~~Coronary CT Angiography as an Alternative to Invasive ...~~

This film is aimed at patients who have been referred for a coronary angiogram and stenting, also known as percutaneous coronary interventions (PCI). The film explains what the procedure involves ...

~~Basic Angiographic Views Interpretation—IJN College~~

Coronary angiography (CAG) is the gold standard for diagnosing coronary artery obstructive disease (CAOD). Currently, cineangiography, which refers to CAG using cinematography for image acquisition, is the standard method and a major contributor to the total radiation dose delivered during CAG.

~~Coronary angiogram—Mayo Clinic~~

Coronary Angiography is an appropriate introduction to the mastery of identifying normal and abnormal coronary arteries. The book is intended to serve as an introductory volume for cardiologists and radiologists performing catheterizations, but its scope may be extended to any physician whose practice involves coronary artery disease.

~~Angiography—Wikipedia~~

CORONARY ANGIOGRAM Definition: An invasive examination involving injection of contrast media after selective cannulation of the coronary arteries with image acquisition in multiple projections.

~~Cardiac Catheterization and Coronary Angiography—Heart ...~~

Coronary angiography is used to study the blood vessels that supply the heart muscle. It may be used if you have any of the following conditions: heart attack – a serious medical emergency where the supply of blood to the heart is suddenly blocked, usually by a blood clot

~~INTRODUCTION—CTHSurgery.com~~

Coronary angiography showed 50% stenosis of the left main coronary artery, severe disease (75% stenosis) of the left circumflex artery, severe disease (70% stenosis) of the proximal left anterior descending artery, and in-stent restenosis (80%) of the stent within the right coronary artery.

~~Introduction to coronary angiogram and stenting~~

Cardiac catheterisation and coronary angiography can provide important information about the heart and the blood vessels that surround and supply it. Coronary arteries provide a blood supply to your heart muscle.

~~Procedural Techniques of Coronary Angiography~~

Coronary angiography can be used to help diagnose heart conditions, help plan future treatments and carry out certain procedures. For example, it may be used: after a heart attack – where the heart's blood supply is blocked

~~Cardiac catheterisation and coronary angiography—NHS~~

The first selective coronary angiogram was performed by Mason Sones in 1959 through the brachial cut-down technique. With the prior introduction of the Seldinger wire cannulation method for vascular cannulation percutaneous transfemoral catheterization technique was developed.

~~Coronary heart disease Introduction~~

Invasive coronary angiography is often used to diagnose coronary anomalies and they are routinely found unexpectedly when angiograms are performed for other reason, but ICA has inherent limitations to accurately study coronary anomalies because of its two dimensional display and the non-visualization of adjacent vascular structures.

~~Radiation dose in coronary angiography and intervention ...~~

Coronary heart disease (CHD) is a major cause of death worldwide. It's responsible for more than 73,000 deaths in the UK each year. About 1 in 6 men and 1 in 10 women die from CHD. In the UK, there are an estimated 2.3 million people living with CHD and around 2 million people affected by Angina (the most common symptom of coronary heart disease).
