The core of the engine is the cylinder, with the piston moving up and down inside the cylinder. Single cylinder engines are typical of most lawn mowers, but usually cars have more than one cylinder (four, six and eight cylinders are common).

The lubrication system ensures that all

Bookmark File PDF Diesel Engine Parts And Functions

the moving parts of the engine are kept well oiled in order to provide a long serviceable life. The lubrication system performs five important functions:

- Lubricates - reduces friction between moving parts by providing a thin film of oil.
- Cools - heat is transferred to the oil from the engine.

In liquid rocket engines, the oxidiser comes in the form of a liquid and needs to be delivered at high pressure (typically 10-230 bar or 1-23 MPa) to the combustion chamber. This is normally achieved by the use of a centrifugal pump powered by a gas turbine — a
