A Digital SLR camera user might use a fixed focal length wide angle lens while taking landscape pictures, and then switch to a fixed focal length telephoto lens to get a closer shot of a bird in a tree. Or maybe the Digital SLR camera user might use a wide angle to telephoto zoom lens to take the pictures in both situations.

*Digital Camera Features And User*  
In general, there is a 1-2 second time lag between pressing the shutter button and a picture being taken with a digital camera. Then there is a 2-30 second recovery time before the camera is able to take another photo. With the Burst Mode feature you can take several pictures in a row.

*Digital Camera Buying Guide - Features & Comparisons*  
Digital and movie cameras share an optical system, typically using a lens with a variable diaphragm to focus light onto an image pickup device. The diaphragm and shutter admit the correct amount of light to the image, just as with film but the image pickup device is electronic rather than chemical.
