The German seismic code DIN 4149 (2005) as national application document of the European seismic code EC 8.1 (2003) was completely revised on this behalf with regard to the actual state of art. At the time, the German nuclear codes are adapted to the revised building codes.

~~DIN-4149—Buildings-in-german-earthquake-areas—Design----~~

Module BEBEN determines the restraining forces and moments from earthquake loads for regular structures according to DIN EN 1998-1 Eurocode 8 or DIN 4149 (seismic calculation). The building mass can be distributed evenly or variably over the height. The individual forces are simply applied linearly over the height of the structure.

Abstract Due to the introduction of the revised German Earthquake design standard DIN 4149 in 2005 including a re-evaluation of earthquake loadings and the forthcoming introduction of the European Earthquake standard DIN EN 1998 (Eurocode 8) the demands on the overall Earthquake structural design increases.

Die Auslegung von Bauwerken gegen Erdbeben ist in Deutschland seit 1981 durch die DIN 4149 (1981) bauaufsichtlich geregelt. Diese Norm wurde in den letzten Jahren durch den NA Bauarbeitsausschuss „Erdbeben; Sonderfragen“ des Deutschen Instituts für Normung e. V. (DIN) vollständig überarbeitet und als Ergebnis erschien im April 2005 die Neufassung.

The Model 4149-DIN Glass Fibre to Copper Interface Converter is designed to operate from -40°C to 85°C. Model 4149 is a member of Electro Standards Laboratories' (ESL) rugged community fiber-to-copper media converter family. The Model 4149-DIN features protection circultry on all receivers and transmitters for both RS232 and RS485/422 interfaces.

~~DIN-EN-1998-1—Techstreet~~

Developments are presented, which have lead to the elaboration of the new German Seismic Code DIN 4149: 2005-04 on the basis of Eurocode 8. So beside of a new version of the seismic zoning map a complete revision of the definition of the seismic action, of safety verifications and of detailing rules is performed.
