A flowchart is a type of diagram that represents a workflow or process. A flowchart can also be defined as a diagrammatic representation of an algorithm, a step-by-step approach to solving a task.. The flowchart shows the steps as boxes of various kinds, and their order by connecting the boxes with arrows.

## **Exercise 1 - Flowchart - DYclassroom | Have fun learning :-)**

An algorithm is a set of instructions, and an algorithmic problem lends itself to a solution expressible in algorithmic form.

Algorithms manipulate data, which are represented as variables of the appropriate data types in programs. Data structures are collections of data. The characteristics of algorithms are

presented in this chapter, so are the

## **Logical Reasoning Flow Chart Questions and Answers**

Algorithm and flowchart are the powerful tools for learning programming. An algorithm is a step-by-step analysis of the process, while a flowchart explains the steps of a program in a graphical way. Algorithm and flowcharts helps to clarify all the steps for solving the problem.
