In order for the active ingredient to be most effective or to obtain the ideal delivery form for the market, the actual synthesis and purification steps are followed by formulation to give end products that range from powders, agglomerates, and granules to suspensions, emulsions, microemulsions, microcapsules, instant preparations, liposomes ...

Ian Morrison© 2008 Lecture 6 - Emulsion technology Manufacture of butter* • Milk is a fairly dilute, not very stable O/W emulsion, about 4% fat. • Creaming produces a concentrated, not very stable O/W emulsion, about 36% fat. And is skimmed off. • Gentle agitation, particularly when cool, 13 - 18 C, inverts it to make a

chemistry, analysis, and not least process technology. Modern commercial forms and forms for application rely on many methods from process technology and on advanced modern analytical techniques. Thus the discipline of formulation has developed into formulation technology, which rests on solid scientific supports, and in which

Emulsions Suspensions These are biphasic liquid preparations containing two immiscible liquids one of which is dispersed as minute globules into the other These are biphasic liquid dosage form of medicament in which finely divided solid particles are dispersed in a liquid Globule size of the dispersed liquid is in the range of 0.25 to 25µm ...

Formulation Technology

It offers a well-structured and concise treatment of current industrial applications of this technology. It also provides information on basic physico-chemical theory on colloids, emulsions, microemulsions, foams, suspensions and solids. Focuses on many applications of this technology in the chemical process industries. (source: Nielsen Book Data)
