Grapevine Breeding Program - Cornell University  
Grapevine breeding programs are aimed at improving agronomic traits such as wine quality, disease and pest resistance, hardiness and soil adaptation. Traditional methods remain relevant, but new molecular analytical techniques and advances in grapevine genetics have greatly improved the effectiveness of breeding programs for the wine industry.

---

Grapevine Breeding Programs for the Wine Industry ...  
Grapevine Breeding Programs for the Wine Industry: Traditional and Molecular Techniques summarizes recent trends in grapevine breeding, both in terms of research and practical programs. The first group of chapters covers the challenges faced by breeders and existing and emerging techniques used to combat them.

---

Grapevine Breeding Programs for the Wine Industry ...  
The grapevine breeding program maintained by IAC is a landmark for the beginning of the development of cultivars adapted to tropical climates. Several table grape cultivars, such as Piratininga and Patricia, fundamental to the development of tropical viticulture in São Francisco River Valley ( Soares and Leão, 2009 ), were developed by the program.

---

Grapevine Breeding Programs For The  
Selected Resources for Researchers (emphasis on grapevine breeding and genetics) International Grape Genome Program. Plant Genetic Resources Unit - USDA collection of cold tolerant grape germplasm at Geneva, NY. Foundation Plant Services - Davis, California, source of clean planting stock, including Cornell varieties.

---

Grapevine breeding programs in Brazil - ScienceDirect  
Grapevine is a major fruit crop used for the production of table grapes, dried raisins, wines and spirits. These diverse products each require that the fruit have specific qualities (yield, color, firmness, composition, sanitary status...) at harvest.

---

9781782420750: Grapevine Breeding Programs for the Wine ...  
The aim of a number of grapevine breeding programs throughout the world is to develop new varieties resistant to diseases using complex hybrids between European and American species of Vitis. Within these breeding programs it is essential to maintain heterozygosity and desirable hybrids are multiplied by asexual propagation.

---

Available presentations - Grapevine Breeding and Genetics 2018  
Bruce Reisch specializes in the development of new wine and table grape varieties, as well as new grape breeding techniques. Since joining the Cornell faculty in 1980, his program has released eleven new grape varieties - eight wine grapes (cooperatively with the Dept. of Food Science and Technology) and three seedless table grapes. The grape breeding program continues to emphasize wine ...

---

Grape Breeding Procedures - Cornell University  
The grape breeding program continues to emphasize wine variety development with a strong emphasis on combining wine quality with disease resistance and cold tolerance. We develop flavorful, attractive table grapes, as well.

---

Grapevine breeding programs in Italy | Request PDF  
Grape Breeding Procedures. The earliest varieties were propagated from choice wild seedlings, the products of chance crosses between vines. The process of breeding, however, goes one step further, by controlling pollination and choosing which varieties will act as parents for seed production.

Bruce Reisch | Plant Breeding and Genetics Section  
Breeding methods Traditional breeding research of new fungus resistant grapevine varieties is supported by modern breeding methods to make the tedious selection process faster and more efficient. The main objective is to elucidate the relationship between relevant traits and their genetic basis.
