Desiccant Dryers are used wherever compressed air or gas needs to be dried to a pressure dew point of -20°, -40° C or, optionally, -70° C. In addition to the specific application, the size of the Desiccant Dryer is primarily determined by the medium, flow rate, operating pressure, inlet temperature and the required pressure dew point.

Get a refrigerated air dryer to help easily provide continuous dry air to your compressed air supply line. Refrigerated compressed air dryers work by cooling the air that enters the compressor, helping the water vapor in the air to condensate and drain out. Providing dry air can help protect your pneumatic piping, tools and equipment.
