not to the same level as their typically developing bilingual peers, but they match their monolingual peers with a speech and language disorder, if given similar opportunities.

Kohnert, K: Language Disorders in Bilingual Children and ...

Purpose Attention and language are hypothesized to interact in bilingual children and in children with developmental language disorder (DLD). In children who are bilingual, attentional control may be enhanced by repeated experience regulating 2 languages. In children with DLD, subtle weaknesses in sustained attention may relate to impaired language processing. This study measured attentional ...
