The hottest exoplanet discovered so far is hotter than a whole lot of stars. The newly described Kelt-9b is a scorching 3,777 degrees Celsius (6,830 °F), and that’s on the dark side! On the side actually facing its star, the temperatures rise to about 4,327 degrees Celsius (7,820 °F), almost as toasty as the surface of the Sun.

Life As A Cosmic Phenomenon 2 The Panspermic Trajectory

Based on this teleological hypothesis we postulate that two distinct classes of cosmic viruses (cosmic viral genes) are involved in accounting for the facts relating to the evolution of life. This article was originally published in Journal of Astrobiology and Outreach , 2 (2014) 115.

Play as a Cosmic Phenomenon - Ljubodrag Duci Simonović

A major paradigm shift with potentially profound implications has been taking place over the past 3 decades at a rapidly accelerating pace. The Copernican revolution of half a millennium ago is now being extended to place humanity on the Earth in its correct cosmic perspective -- an assembly of cosmically derived viral genes, no more, no less, pieced together over 4 billion years of geological ...
