new member and my two cents worth. I have Mazda BT50 6speed auto. Always now tow in S mode. this usually equates to 4th gear. Tried to trick it by manually holding in 5th, but upped fuel consumption that way. It equates to torque v revs etc. Not enough tech to explain better. At 95-100km/hr indicated this is 14-17 km/l towing tandem Paramount poptop.

The sensor modifies a voltage signal from the Engine Control Module (ECM). The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature.

temperature is low and turns off after the engine is warm. If the low engine coolant temperature indicator light remains illuminated after the engine has been sufficiently warmed up, the temperature sensor could have a malfunction. Consult an expert repairer, we recommend an Authorised Mazda Repairer.

Coolant Temperature

It is a general code, which means that it's going to have the same meaning for the Mazda BT-50 as it would any other vehicle. P0118: Engine Coolant Temp Sensor Circuit → High Input. This code is thrown when the resistance coming from the coolant temp sensor does not change as the vehicle warms up. Mazda

Damaged

Coolant leak and blown gasket are the ones that come to mind.

When your car is cool, take off the radiator cap and see whether the coolant is up to the rim or not. If it isn't, there's a leak somewhere. Change your mechanic, they seem to be only fixing the symptoms, not the cause.
