## Medicinal Chemistry Of Diuretics

Diuretics • A diuretic is a drug that increases the secretion of urine (ie, water, electrolytes, and waste products) by the kidneys. • Many conditions or diseases, such as hypertension, congestive heart failure, endocrine disturbances, and kidney and liver diseases can cause retention of excess fluid (edema). • A diuretic is used when the patient shows signs of excess fluid

## THE CHEMISTRY OF DIURETICS - Sprague - 1958 - Annals of ...

Diuretics are used in the treatment of conditions such as hypertension, heart failure and cirrhosis. These ten questions test your knowledge about the essential, core facts that you, as a student, are expected to know. Receive INSTANT access to 720 more quiz questions by registering with PharmaFactz today!
