DrugFacts: Understanding Drug Use and Addiction | National ...

Methamphetamine is a highly addictive stimulant drug. It causes long-term damage of the central nervous system. Methamphetamine was derived from amphetamine drugs, and it can lead to problematic use, heart-rhythm disruptions, and changes in behavior. Unlike cocaine, another popular stimulant, methamphetamine is man-made, can quickly damage nerve terminals in the brain, and lingers in brain...

Although taking drugs at any age can lead to addiction, the earlier that drug use begins, the more likely it will progress to addiction. This is particularly problematic for teens. Because areas in their brains that control decision-making, judgment, and self-control are still developing, teens may be especially prone to risky behaviors, including trying drugs.
