However, he did show us a programmed instruction approach for reaching a broad audience of more capable learners - the Sidman and Sidman [1965] Neuroanatomy text (subsequently updated to take advantage of newer technological support [Gould & Brueckner, 2007]). Regrettably, this type of instruction also remains the exception.

This section contains free e-books and guides on neuro anatomy, some of the resources in this section can be viewed online and some of them can be downloaded. This is an online tutorial for human neuroanatomy. It is designed as a supplement to textbook and class learning or as a lab substitute when human specimens, slides and models are not available. Also includes thousand of images and hundreds of linked illustrated glossary terms, as well as movies, quizzes and interactive animations.

I am convinced a Jr. High student could master neuroanatomy if they had this book. It is fine to buy a used copy as long as it wasn't written in as it is a workbook with fill in the blanks. Each question teaches a concept and asks you a simple question. It is layered in such a way that you learn neuroanatomy without realizing it.

If you were to buy one book to learn Neuroanatomy this is the one to buy. It is, as the title states, a programmed learning tool, which in this case uses a fill in the blank methodology to teach you different anatomical names, locations, and purposes. Besides structural location this book also reviews Brodmann Areas as well.

~~Neuroanatomy: The Human Brain (NSC 274, formerly Psy 274 ...~~

For a programmed workbook in clinically oriented neuroanatomy, the combination should be unbeatable. The 645 pages of this book contain 1,318 items, each in the form of a sentence or paragraph with missing words to fill in, and usually with a small diagram which in many cases is a 3-D phantom rendering.
