I have an Onan 2 cylinder Genset diesel model MDKUB. There is white smoke coming out of the exhaust and it runs rough. I had the injectors checked and they're ok. I disconnected the fuel line to 1 of the cylinders and it ran worse. When I disconnected the other one the engine smoothed out and the smoke disappeared.

I have a 18hp Onan twin that's only running on one cylinder. I have worked on small engines most of my life but this one has got me stumped. My engine started running intermediately on and off on one cylinder. Then it dropped the front cylinder completely. I can not get it to fire on that cylinder no matter what I do.

~~Old twin cylinder Onan start~~

A straight-twin engine, also known as straight-two, inline-twin, vertical-twin, or parallel-twin is a two-cylinder piston engine which has its cylinders arranged side by side and its pistons connected to a common crankshaft. Compared to V-twins and flat-twins, straight-twins are more compact, simpler, and usually cheaper to make, but may generate more vibration during operation.

~~Onan Engine Information | Sciencing~~

There are two spark plugs in this 2 cylinder engine. One side of the secondary goes to one plug and the other side goes to the other plug. Both plugs fire simultaneously with the circuit completed through the engine block but each cylinder burns on every other spark. There is a capacitor across the point.
