## **Management of Lymphoma | Hodgkin's lymphoma | PatientsEngage**

If it is non-Hodgkin lymphoma, what kind (histologic type) of non-Hodgkin lymphoma is it? What is the stage or extent of spread of the lymphoma? In order to understand the best treatment options available for lymphoma, it is important to determine the stage or where the cancer has spread in the body.

## **Lymphoma: Definition, Symptoms, Causes, Diagnosis, Treatment**

Lymphoma. Diagnosis, if enlarged lymph nodes are present, is usually by lymph node biopsy. Blood, urine, and bone marrow testing may also be useful in the diagnosis. Medical imaging may then be done to determine if and where the cancer has spread. Lymphoma most often spreads to the lungs, liver, and brain.

## **Lymphoma - Wikipedia**

Lymphoma is a cancer that starts in the lymphatic tissue. It is the most common blood cancer and the third most common cancer of childhood. The UCLA Lymphoma Program is exclusively dedicated to diagnosis, treatment and management of patients with lymphomas. Our multidisciplinary team is dedicated to getting you through your fight with cancer.

In patients with mantle cell lymphoma (MCL), \_\_\_\_\_ has been found to correlate with treatment response.

Lymphoblastic lymphoma (LBL) is a rare disease, comprising about 2% of all non-Hodgkin lymphomas (NHLs) in adults.[1] It is a highly aggressive subtype of lymphoma, most commonly of precursor T-cell origin, occurring most frequently in adolescents and young adults, with male predominance and frequent mediastinal, bone marrow, and central nervous system (CNS) involvement.
