~~Practical Introduction to Digital Filtering —MATLAB ...~~

Digital signal processing (DSP) is the use of digital processing, such as by computers or more specialized digital signal processors, to perform a wide variety of signal processing operations. The signals processed in this manner are a sequence of numbers that represent samples of a continuous variable in a domain such as time, space, or frequency.

~~Digital Signal Processing using Arm Cortex M based ...~~

Digital Signal Processing (DSP) is a vast and fascinating subject which has exploded in application in recent decades. In its simplest form, high-pass, low-pass, notch, or bandpass filters can be implemented in the digital domain, with far greater precision and stability than analog counterparts, and very often at much lower cost.
