Breathing and Respiration, Gas Exchange - Pass My Exams ...

11) Gas exchange in humans Characteristics of respiratory surfaces: The exchange of oxygen and carbon dioxide across a respiratory surface, as in the lungs, depends on the diffusion of these two gases. Diffusion occurs more

rapidly if: There is a large surface area exposed to the gas. The distance across which diffusion has to [...]

AQA A-Level Biology -Gas Exchange questions Flashcards ... Carbon dioxide is the waste gas that is produced when carbon is combined with oxygen as part of the body's energy-making processes. The lungs

and gas exchange system allow oxygen in the air to be taken into the body, while also enabling the body to get rid of carbon dioxide in the air breathed out.

Exchangens Paper B. Alveoli walls is one cell thick which increase the rate of diffusion of gases, C. A thin film of moisture covering the surface of the alveolus allows membranes to slide over each other easily during breathing. D. Numerous alveoli help increase surface area to volume ratio facilitates exchange of gases.

Class 11 Important Questions for Biology -AglaSem Schools Gas Exchange in Humans The gas exchange surface of a mammal is the alveolus. There are numerous alveoli - air sacs, supplied with gases via a system of tubes (trachea,

splitting into two bronchi - one for each lung - and numerous bronchioles) connected to the outside by the mouth and nose.

Question Bank Respiratory System -Testlabz Gas exchange is the delivery of oxygen from the lungs to the bloodstream, and the elimination of carbon dioxide from the bloodstream to the lungs and out of the body. Air enters the body through the mouth and nose, from here it moves to the

pharynx (throat), passes through the larynx (voice box) and enters the trachea.
