Consent for childhood cancer tissue banking in the UK: the ...

Although aggressive medical treatment protocols have led to 80% five-year survival rates for most childhood cancer patients, many long-term survivors experience multiple troubling symptoms. Using data from 100 adult survivors of childhood cancers (ACC-survivors), we used latent variable mixture modeling to generate unique subgroups of survivors based on their experiences with a cluster of ...

Understanding Pediatric Cancer (1): Types of Childhood Cancers

The cure rate of childhood cancer has increased from approximately 25% in the 1960's to more than 75% in more recent years. However, very little is known about how children actually experience the diagnosis and treatment of their illness. A total of 9 families in which a child was diagnosed with cancer were interviewed twice over a 12-month ...
