Signal transduction pathways convert extracellular stimuli into specific cellular responses (Campbell and Reece, 2004).

Typically, signal transduction begins with a signal to a receptor and ends with a change in cell function. Sometimes, there is a cascade of signals within the cell.

Signal transduction  
(also known as cell  
signaling) is the  
transmission of  
molecular signals from  
a cell's exterior to its  
interior. Most  
commonly protein  
phosphorylation is  
catalyzed by protein
