**Synthesis, Structure Analyses, and Characterization of ...** In chemistry, a glycoside / ˈ ɡ l ɪ k ə s aɪ d / is a molecule in which a sugar is bound to another functional group via a glycosidic bond.Glycosides play numerous important roles in living organisms. Many plants store chemicals in the form of inactive glycosides. These can be activated by enzyme hydrolysis, which causes the sugar part to be broken off, making the chemical available for use.
