By Shannon Connell October 30th, 2015. The Psychoneuroimmunology of Stress: Acute and Chronic. Research by: Shannon Connell. Psychoneuroimmunology (PNI) is a field of research that deals with the interaction of the central nervous system, the endocrine system, and the immune system, and how these systems can be altered through behavior and stress.

~~Psychoneuroimmunology and Stress—Verywell-Mind~~

Assessment: This book breaks new ground in terms of concisely reviewing the literature on psychoneuroimmunology. There are intriguing ideas and clear promise in the future of this line of inquiry. Individuals involved with clinical and research work in the narrow field of depression and inflammatory disease would be remiss to bypass this fine book.

~~Psychoneuroimmunology of Chronic Disease: Exploring the ...~~

Psychoneuroimmunology underscores the notion that disease begins within organismic microenvironments. A microenvironment can be defined at different levels, such as that immediately adjacent to a segment of DNA containing a single gene or that surrounding a single cell or a small volume of tissue composed of a few interacting cells.

~~The Psychoneuroimmunology of Chronic Disease: Exploring ...~~

Because these hormones and neurotransmitters modulate the immune response and play a role in RA, it is likely that stress modulates disease activity and onset. Evidence for a role of stress in disease onset and progression will be summarized at the end of this chapter. RA is an example of a chronic pro-inflammatory autoimmune disease.

~~The Psychoneuroimmunology of Stress: Acute and Chronic ...~~

Psychoneuroimmunology has emerged as a discipline advancing our knowledge of the relationships among psychosocial factors, the central nervous system, the immune system, and disease. The growing volume of evidence suggests that psychological states, including exposure to stressors and the presence of depressive states, may influence health and disease by altering immunologic states.

~~Psychoneuroimmunology and coronary heart disease—Oxford ...~~

“Psychoneuroimmunology refers, most simply, to the study of the interactions among behavioral, neural and endocrine (or neuroendocrine), and immunologic processes of adaptation. Its central premise is that homeostasis is an integrated process involving interactions among behavior and the nervous, endocrine, and immune systems.”
