The early years of automata theory Kleene's theorem [68] is usually considered as the starting point of automata theory. It shows that the class of recognisable languages (that is, recognised by finite automata), coincides with the class of rational languages, which are given by rational expressions.

Finite automata ← •This will be a quick tour through some of the basics of the abstract theory of computation. We will start with a relatively straightforward class of machines and languages - deterministic finite automata and regular languages. In this context when we talk about a machine, we mean an abstract rather
