Type 1 versus Type 2 .  
The biggest difference  
between these two  
types of diabetes  
(there are more) is  
found in the production  
of insulin. In type 1,

with diabetes have type 2 diabetes. This type of diabetes is largely the result of excess body weight and physical inactivity. Symptoms may be similar to those of type 1 diabetes, but are often less marked. As a result, the disease may be diagnosed several years after onset, after complications have already arisen.
