In Windows we use the CreateFile() function to open a serial port.

CreateFile() is a Win 32 function which is used to create or open a file, stream or an IO device like serial port. On success CreateFile() will return a handle which is then used to refer the connection in all subsequent operations.

Hi there, I am trying a sample code from a book named Windows Serial Port Programming Handbook, which is programmed under VC++6. My program editor is VC++2005. However, I get stuck in some linking errors. I know this is because the lib files are not imported into the project, but I don't know how to solve the problems.
